

Safety of our customers and inspection staff is a top priority. CCRL asks for the assistance of laboratories to help maintain a safe inspection environment for not only your facility, but each facility visited after your inspection.

In order to provide a safe inspection, CCRL staff will do the following:

CCRL inspection staff have met the COVID-19 vaccination requirements of ASTM International before being eligible to conduct onsite inspections.

If the CCRL Inspector has been potentially exposed to COVID-19 or exhibits COVID-19 symptoms, CCRL will delay and reschedule the onsite inspection with another Inspector as soon as possible. Any laboratories that were potentially exposed to such an incident will be notified immediately of the situation.

In order to provide a safe inspection, CCRL asks laboratories to do the following:

If laboratory staff were potentially exposed to COVID-19 and were in the proximity of CCRL inspection staff, please contact CCRL immediately to help isolate the spread of COVID-19.

Should your laboratory have specific safety policies or guidelines related to COVID-19, please convey that information to the CCRL Inspector prior to the onsite inspection.

For any concerns or potential exposures, please contact:

Steven Lenker
Director, Construction Materials Reference Laboratories
(240)-436-4804
